AI

- Built custom Claude skills for logging and debugging to speed up application performance optimization. These skills let developers use simple prompts like "compare traffic and health of service past 1 hour" to quickly analyze service metrics.
- Leveraged AI support to build a UI that automates application deployment, log inspection, and service health monitoring.

SKILLS

Spring Boot, Micro Services, REST, AWS Services, Kafka, Redis, Elastic Search, Cassandra, DynamoDB, Kubernetes, Grafana, Kibana, Prometheus, NewRelic, Optimizely, A/B Testing, Observability, API Proxy, Hexagonal Architecture, Clean Code, Shared Library, AI, Claude, Cursor, Copilot, Maven, Gradle, Gatling, datalake, snowflake, TBD

LANGUAGES

Java
Kotlin
Python

EDUCATION

M. Tech Computer Science, International Institute of Information Technology Hyderabad
2015 – 2017
8.5

B. Tech Computer Science, College of Technology Pantnagar
2010 – 2014
7.95

Intermediate, Lord Mahavira Academy
2009 – 2010
91.8 %

ACHIEVEMENTS

- Secured All India Rank 653 in GATE exam 2015
- Dean List of Academic Excellence during M. Tech (2015 – 2016)

WORK EXPERIENCE

Paytm, Technical Lead

01/2023 – Present | Bangalore

- Lead the team of 4 to deliver high quality software solutions which includes Design Discussion, Development, Dev Integration Testing, Perf Testing, Deployment, Active Monitoring using Alerts and Dashboards, A/B testing, Feature flags using Optimizely and proper Documentation on Confluence.
- Deliver weekly deployments across multiple services via trunk-based development maintaining detailed changelogs.

Paytm, Senior Software Engineer

09/2021 – 12/2022 | Bangalore

- Part of PLC (Payment Linked Coupons) team in Paytm which partners with PayPay HQ Tokyo Japan. PayPay app have 10M+ downloads, 63M registered users.
- Take measures to build cost sensitive services e.g. vertical scale down aws instances like elasticsearch, autoscaling enabled for pods and save only essential logs.

Infosys Limited, Software Engineer

07/2017 – 09/2021 | Bangalore

- Developed Players Portal as a microservice using AWS Media Live and Media Convert.
- Used in Australian Open and French Open 2019, 2020 and 2021 by players and coaches.
- This project was showcased as one of the top 10 projects in Infosys.

PROJECTS

Features in PayPay app (Tokyo HQ)

09/2021 – Present

- 1-1 coupons – Supports 3M stores and 30M users.
- Return Visit Coupon – Supports 1k transactions per second. This feature was able to Double the redemption rate and revenue.
- High performant bulk claim which supports 1k RPS (20 coupons claim batch size)
- Glue job that inserted and deleted high-volume data (30K records) from a DynamoDB table with 200 million records utilising GSI and parallel processing in just a few minutes.
- Refactored common code logic like **Idempotency** into a **shared library** published to a central Maven repository, allowing each service to consume it as a dependency.
- Multiple critical services having 3k RPS, 4k TPS phased migration from java into kotlin using API Proxy following clean code hexagonal architecture.
- Performant API handling a 1B-row table and optimized schema operations using batching and stored procedures.

Roland Garros Team Paris HQ (Infosys Players Portal)

2020 – 2021

- Worked with Roland Garros Team Paris HQ 2021, 2020 and 2020 (Infosys Players Portal).
- Worked on Java Spring Boot Microservices (backend APIs) for generating match highlights.

Tennis Australia Australian Open

2019 – 2021

- Worked with Tennis Australia for Australian Open 2021, 2020 and 2019 at Melbourne.
- Worked on Java Spring Boot Microservices (backend APIs) to publish match highlights to Google One Box.
- Tennis Australia published highlights for AO across social media using Australian Open handle during the tournament.

HIVE Open Source Contribution

- Enhanced HIVE grammar to include support for query "SELECT COLUMNS LIKE regex".
- <https://issues.apache.org/jira/browse/HIVE-18373>.
